

29 April 2026

Further content growth in next-gen AI GPUs; Raise estimates and PT

We further revise up our earnings estimates on Jentech, mainly driven by the continued price hike/content growth in next-gen AI GPUs. For one major AI GPU, we believe Jentech will start shipping its next generation from 2Q26, with an increased content value to reflect higher material prices. In addition, we believe the other AI server GPU customer will require an upgraded heat spreader solution too, which could drive significant content growth for Jentech as well. With the shipment ramp of these new AI GPUs in the upcoming quarters, we believe Jentech could deliver stronger earnings growth in the next few years. Therefore, our 2026, 2027 and 2028 EPS estimates are now 12%, 3% and 12% above BBGe consensus, even without factoring in a meaningful contribution from micro channel lid.

- **We previously underestimated its content.** We now believe Jentech's content in the next generation of AI GPU (adopting stiffener ring + 2-piece gold-plated lid) could further increase, in order to reflect the higher material prices of the special metal/compound. As Jentech would start shipping this high-end solution from 2Q26, we see stronger rev and earnings growth for the company in the upcoming quarters in 2026 and 2027.
- **AMD MI450 GPU to potentially upgrade heat spreader solution with multi-times content growth.** In our view, AMD's next gen AI GPU (MI450), which is expected to ramp in 4Q26, will also upgrade its heat spreader solution to the stiffener ring + lid design given the larger chip size and higher TDP. As Jentech has always been the sole supplier of high-end server chips, the heat spreader upgrade with decent content growth could become a meaningful driver for Jentech from late 2026 and more in 2027.
- **1Q26 preview; strong 2Q26 outlook.** Jentech's reported 1Q26 revenue of NT\$5.3bn (+1% QoQ; +12% YoY) was largely in line with JPMe and consensus, and we model its GM to grow sequentially to 42.5% from the 4Q25 level of 41.2% with better mix (e.g. more B300 shipments). Looking into 2Q26, we believe Jentech's revenue could grow meaningfully by 29% QoQ to NT\$6.8bn, which is 2% above current BBGe, underpinned by continued growth in B300 shipments and initial contribution from Rubin GPU and potentially AMD MI450. This should also drive Jentech's 2Q26 GM to further grow to ~44% with the ongoing enhancement of product mix.
- **Implications.** We increase our 2026E, 2027E and 2028E EPS by 10%, 21% and 18% to NT\$69, NT\$133 and NT\$177 to reflect higher heat spreader content in both Nvidia's and AMD's next-gen AI GPU. Thus, our new Dec-27 PT is lifted to NT\$5,300 (up from NT\$4,500), based on an unchanged 30x 2028E P/E (largely in line with Jentech's 3yr avg P/E when the AI server boom started), which we believe could be warranted by the strong earnings growth potential and multiple new catalysts (e.g., CPO switch) for the company in the next few years.

Summary Investment Thesis and Valuation

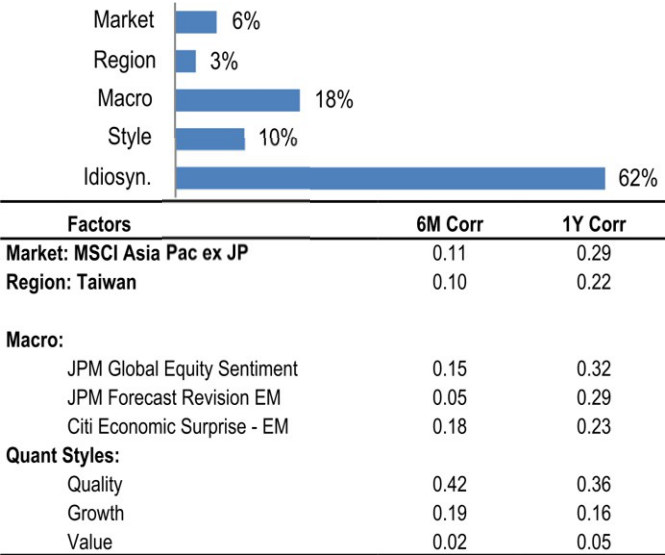

Investment Thesis

Jentech (OW) is the largest packaging-level cooling component maker worldwide, with leading production capabilities across heat spreader products (including stiffener and all kinds of lids). We expect the company to grow EPS at a ~60% CAGR over 2024-28, driven by solid heat spreader content growth in future-gen AI chips and increasing TAM into new solutions (e.g., CPO switch ASIC). In addition, the company is reinforcing its product portfolio with new offerings in cold plate and CPU server sockets for chip customers. We believe Jentech's technology leadership in the structural cooling upgrade trend and its new TAM expansion will continue to support its superior earnings power in the long term.

Valuation

Our Dec-27 PT of NT\$5,300 is based on 30x 2028E P/E, largely in line with Jentech's three-year average P/E when the AI server boom started.

Investment Thesis, Valuation and Risks

Jentech Precision Industrial Co. (Overweight; Price Target: NT \$5,300.00)

Investment Thesis

Jentech (OW) is the largest packaging-level cooling component maker worldwide, with leading production capabilities across heat spreader products (including stiffener and all kinds of lids). We expect the company to grow EPS at a ~60% CAGR over 2024-28, driven by solid heat spreader content growth in future-gen AI chips and increasing TAM into new solutions (e.g. CPO switch ASIC). In addition, the company is reinforcing its product portfolio with new offerings in cold plate and CPU server sockets for chip customers. We believe Jentech's technology leadership in the structural cooling upgrade trend and its new TAM expansion will continue to support its superior earnings power in the long term.

Valuation

Our Dec-27 PT of NT\$5,300 is based on 30x 2028E P/E, largely in line with Jentech's three-year average P/E when the AI server boom started.

Risks to Rating and Price Target

Downside risks include: (1) slower micro-channel lid adoption; (2) new competition in the high-end heat spreader market; and (3) other new cooling technologies that may lead to heat spreader removal or de-spec (silicon-integrated micro-cooler, CoWoP, etc.).
