Data Center Watch: GPU Rental Prices Track Higher M/M in March; DRAM & NAND Contract Prices to Expand in 2Q, Albeit at Modestly Softer Pace

In the Data Center Watch product, we are outlining key data points relevant to AI infrastructure demand and bill-of-materials, including GPU rental prices and latest memory cost trends for equipment manufacturers for both DRAM and NAND.

Across non-hyperscaler capacity, GPU rental prices posted broad-based gains in Mar-26, with all three GPU tiers tracking higher m/m — led by a standout surge in B200s. H100 rental prices extended their upward trend, marking the fourth consecutive month of sequential gains, while A100s posted a third straight month of accelerating m/m increases. The B200-to-H100 ratio widened, reversing the multi-month compression trend observed in prior months.

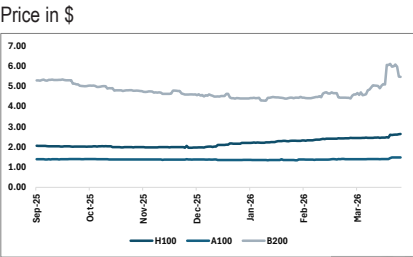

In relation to memory, both the NAND and DRAM contract prices are expected to expand into 2Q26, although the pace of expansion is expected to moderate slightly for both relative to 1Q26. DRAM contract prices expanded +96% q/q in 1Q26, and expectations are for contract prices to further expand +61% q/q in 2Q26E. Similarly, NAND contract prices increased +88% q/q in 1Q26, and expectations are for contract prices to further expand +73% q/q in 2Q26E. Recent forecasts imply that DRAM contract prices are expected to be up +421% y/y and NAND contract prices are expected to be up +362% y/y in 2Q26E.

GPU Rental Price Tracker

Key takeaways based on Bloomberg indices:

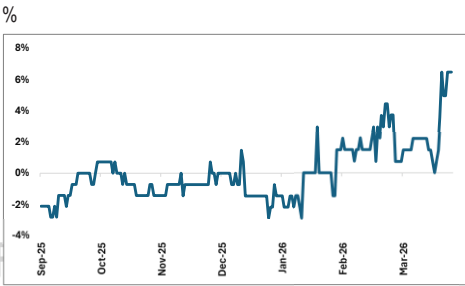

- **A100 rental prices accelerate m/m; H100-to-A100 ratio widens.** A100 rental prices tracked to \$1.48/GPU-hour at the end of Mar-26, up +6.5% m/m (vs. +3.7% m/m in Feb-26 and +1.5% m/m in Jan-26), marking third consecutive month of accelerating m/m gains. The H100-to-A100 price ratio tracked to 1.78x at the end of Mar-26 (vs. 1.75x in Feb-26 and 1.67x in Jan-26), extending the widening trend as demand continues to skew toward higher-performance GPU tiers.
- **H100 rental prices extend m/m gains in Mar-26.** H100 rental prices tracked to \$2.64/GPU-hour at the end of Mar-26, representing a +8.6% m/m increase (vs. +5.2% m/m in Feb-26 and +4.5% m/m in Jan-26), marking fourth consecutive month of sequential price increases.
- **B200 rental prices surge m/m in Mar-26; B200-to-H100 ratio reverses multi-month compression.** B200 rental prices tracked to \$5.47/GPU-hour at the end of Mar-26, up +23.5% m/m (vs. -0.2% m/m in Feb-26 and +0.7% m/m in Jan-26). The B200-to-H100 price ratio tracked to 2.07x at the end of Mar-26 (vs. 1.82x in Feb-26 and 2.63x around index launch in Sep-25), reversing the multi-month compression trend, driven by the outsized m/m surge in B200 relative to H100.

Memory Price Tracker

Key takeaways based on Bloomberg and TrendForce data:

- DRAM spot prices decline for second consecutive month in Mar-26; DDR5 16Gb still up nearly 7x y/y.** DDR5 16Gb spot prices tracked to \$31.18 in Mar-26, which is -6.1% m/m (vs. \$33.20 in Feb-26 and \$34.30 in Jan-26) and +573% y/y (vs. \$4.63 in Mar-25).
- NAND spot prices continue to expand m/m in Mar-26, though pace moderates; NAND 1Tb up nearly 6x y/y.** NAND 1Tb spot prices reached \$28.96 in Mar-26, which is +16.0% m/m (vs. \$24.96 in Feb-26 and \$19.97 in Jan-26) and +475% y/y (vs. \$5.04 in Mar-25).
- DRAM and NAND contract prices expanded +96% and +88% q/q in 1Q26; Contract prices to expand into 2Q26E as well, albeit at a slightly moderated pace.** As per TrendForce, DRAM contract prices expanded +96% q/q in 1Q26 (vs. +48% q/q in 4Q25), while NAND contract prices increased +88% q/q (vs. +36% q/q in 4Q25). For 2Q26E, DRAM and NAND contract prices are expected to expand +61% q/q and +73% q/q, respectively. Updated forecasts imply 2Q26 DRAM contract prices to be up +421%

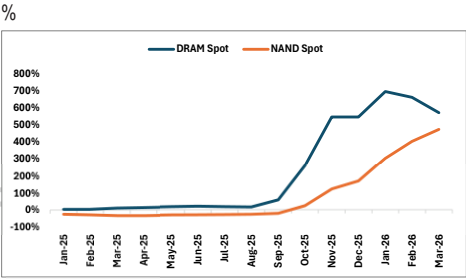

y/y and NAND contract prices to be up +362% y/y.
